

ABSTRACT

An ink jet head includes a head body (11) which is provided with a plurality of nozzles and a plurality of pressure chambers and actuators (14) respectively corresponding to the nozzles. Input terminals (37) of the actuators (14) are arranged locally between left-side and right-side central actuator columns (14A, 14A). A driver IC (13) is mounted on the head body (11) by flip chip bonding.
